

UI Functional Test Scope

Login-App

Generated: 2026-07-14 07:31:37 UTC

Testing Tool: PLAYWRIGHT, SELENIUM

App Type: Java_UI

Functional Validation Summary

Test Scenario	Business Purpose	Expected Result	Migration Result	Status
Verify Dashboard Page Load	To ensure the dashboard page loads correctly after successful authentication and displays user-specific information.	The dashboard page should load, display 'Welcome to the Dashboard', and show the logged-in username.	Passed	Pass
Verify User Logout Functionality	To ensure users can successfully log out from the application and are redirected to the login page with a logout message.	User should be redirected to the login page, and a 'You have been logged out.' message should be displayed.	Passed	Pass
Verify Login Page Load	To ensure the login page loads correctly and all necessary elements (inputs, buttons, links) are present.	The login page should load, display 'Welcome Back', and contain username/password input fields, a 'Sign In' button, and a 'Sign up' link.	Passed	Pass
Verify Successful User Login	To ensure a registered user can log in successfully with valid credentials.	User should be redirected to the dashboard page after successful login.	Passed	Pass
Verify Unsuccessful User Login with Invalid Credentials	To ensure the system handles invalid login attempts gracefully and displays an appropriate error message.	User should remain on the login page (or be redirected to /login?error) and an 'Invalid username and password.' error message should be displayed.	Passed	Pass

Verify Navigation from Login to Register Page	To ensure the 'Sign up' link on the login page correctly navigates to the registration page.	User should be redirected to the registration page.	Passed	Pass
Verify Login Page after Logout Message	To ensure the login page displays the correct message after a user logs out.	The login page should display 'You have been logged out.' message.	Passed	Pass
Verify Login Page with Error Message	To ensure the login page correctly displays an error message when an 'error' parameter is present.	The login page should display 'Invalid username and password.' error message.	Passed	Pass
Verify Login Page with Success Message	To ensure the login page correctly displays a success message when a 'success' parameter is present (e.g., after registration).	The login page should display the provided success message.	Passed	Pass
Verify Register Page Load	To ensure the registration page loads correctly and all necessary elements (inputs, buttons, links) are present.	The registration page should load, display 'Create Account', and contain username/password input fields, a 'Create Account' button, and a 'Sign in' link.	Passed	Pass
Verify Successful User Registration	To ensure a new user can successfully register with unique credentials.	User should be redirected to the login page with a success message after successful registration.	Passed	Pass
Verify Unsuccessful User Registration (e.g., existing username)	To ensure the system prevents registration with duplicate usernames and displays an appropriate error message.	User should remain on the registration page (or be redirected to /register with error) and an error message (e.g., 'Username already exists.') should be displayed.	Passed	Pass

Verify Navigation from Register to Login Page	To ensure the 'Sign in' link on the registration page correctly navigates to the login page.	User should be redirected to the login page.	Passed	Pass
---	--	--	--------	------

Verify Register Page with Error Message	To ensure the registration page correctly displays an error message when an 'error' parameter is present.	The registration page should display the provided error message.	Passed	Pass
---	---	--	--------	------

Project-Specific Validation Scope

- Form submissions on each page work correctly with valid field data
- Form validation errors display properly for empty or invalid inputs
- Submit buttons trigger correct backend actions without 500 errors
- Data tables render with the correct column headers and row content
- Each page loads successfully without 404 or 500 errors

Test Case Details

#	Route	Type	Business Test Scenario	Interaction	Test Steps / Fields
---	-------	------	------------------------	-------------	---------------------

1	/	Thymeleaf Page	Verify Dashboard Page Load	Page load only	1. Navigate to the application's base URL (e.g., after successful login). 2. Verify the page title is 'Dashboard - Auth Demo'. 3. Verify the text 'Welcome to the Dashboard' is visible. 4. Verify the text 'Hello, [username]' is displayed in the navigation bar.
2	/	Thymeleaf Page	Verify User Logout Functionality	Yes	1. Log in as a valid user (e.g., using pre-existing credentials like 'user'/'password'). 2. On the Dashboard page, locate and click the 'Log Out' button in the navigation bar. 3. Verify that the browser is redirected to the '/login' page. 4. Verify that the success message 'You have been logged out.' is displayed on the login page.

3	/login	Thymeleaf Page	Verify Login Page Load	Page load only	1. Navigate directly to '/login'. 2. Verify the page title is 'Login - Auth Demo'. 3. Verify the heading 'Welcome Back' and sub-heading 'Sign in to continue' are visible. 4. Verify the presence of an input field with `id='username'` and `name='username'`. 5. Verify the presence of an input field with `id='password'` and `name='password'`. 6. Verify the presence of a button with text 'Sign In'. 7. Verify the presence of a link with text 'Sign up' that points to '/register'.
---	--------	-------------------	---------------------------	----------------	--

4	/login	Thymeleaf Page	Verify Successful User Login	Yes	1. Navigate to '/login'. 2. In the 'username' field, enter a valid username (e.g., 'user'). 3. In the 'password' field, enter a valid password (e.g., 'password'). 4. Click the 'Sign In' button. 5. Verify that the browser is redirected to the '/' (Dashboard) page. 6. Verify that the text 'Welcome to the Dashboard' is visible on the page.
---	--------	-------------------	------------------------------------	-----	---

5	/login	Thymeleaf Page	Verify Unsuccessful User Login with Invalid Credentials	Yes	1. Navigate to '/login'. 2. In the 'username' field, enter an invalid username (e.g., 'invaliduser'). 3. In the 'password' field, enter an invalid password (e.g., 'wrongpass'). 4. Click the 'Sign In' button. 5. Verify that the browser is redirected to '/login?error'. 6. Verify that the error message 'Invalid username and password.' is displayed on the page.
6	/login	Thymeleaf Page	Verify Navigation from Login to Register Page	Yes	1. Navigate to '/login'. 2. Locate and click the 'Sign up' link in the footer. 3. Verify that the browser is redirected to the '/register' page. 4. Verify that the heading 'Create Account' is visible on the page.

7	/login	Thymeleaf Page	Verify Login Page after Logout Message	Page load only	1. Simulate a logout action (e.g., by navigating to '/login?logout' or performing a logout from dashboard). 2. Verify that the success message 'You have been logged out.' is displayed on the login page.
8	/login	Thymeleaf Page	Verify Login Page with Error Message	Page load only	1. Navigate directly to '/login?error'. 2. Verify that the error message 'Invalid username and password.' is displayed on the page.
9	/login	Thymeleaf Page	Verify Login Page with Success Message	Page load only	1. Navigate directly to '/login?success=Account created successfully!'. 2. Verify that the success message 'Account created successfully!' is displayed on the page.

10	/register	Thymeleaf Page	Verify Register Page Load	Page load only	1. Navigate directly to '/register'. 2. Verify the page title is 'Register - Auth Demo'. 3. Verify the heading 'Create Account' and sub-heading 'Join us today' are visible. 4. Verify the presence of an input field with `id='username'` and `name='username'`. 5. Verify the presence of an input field with `id='password'` and `name='password'`. 6. Verify the presence of a button with text 'Create Account'. 7. Verify the presence of a link with text 'Sign in' that points to '/login'.
----	-----------	-------------------	------------------------------	----------------	--

11	/register	Thymeleaf Page	Verify Successful User Registration	Yes	1. Navigate to '/register'. 2. In the 'username' field, enter a unique username (e.g., 'newuser_123'). 3. In the 'password' field, enter a strong password (e.g., 'SecurePass123!'). 4. Click the 'Create Account' button. 5. Verify that the browser is redirected to the '/login' page. 6. Verify that a success message (e.g., 'Account created successfully!') is displayed on the login page.
----	-----------	-------------------	--	-----	--

Verify
Unsuccessful
User
Registration
(e.g., existing
username)

Yes

1. Navigate to '/register'.
2. In the 'username' field, enter an existing username (e.g., 'user').
3. In the 'password' field, enter a password (e.g., 'password').
4. Click the 'Create Account' button.
5. Verify that the browser remains on the '/register' page (or redirects to '/register?error').
6. Verify that an error message (e.g., 'Username already exists.') is displayed on the page.

13	/register	Thymeleaf Page	Verify Navigation from Register to Login Page	Yes	1. Navigate to '/register'. 2. Locate and click the 'Sign in' link in the footer. 3. Verify that the browser is redirected to the '/login' page. 4. Verify that the heading 'Welcome Back' is visible on the page.
14	/register	Thymeleaf Page	Verify Register Page with Error Message	Page load only	1. Navigate directly to '/register?error=Username already taken'. 2. Verify that the error message 'Username already taken' is displayed on the page.
