PUT/PATCH Requests

0

DELETE Requests

Project-Specific API Validation Scope

- All 0 API endpoints respond with correct HTTP status codes for happy-path requests
- POST endpoints validate required fields and return 201 Created with proper Location headers
- Response payloads conform to expected JSON schemas with correct data types
- Error scenarios return appropriate 4xx/5xx status codes with descriptive error messages

Test Case Details

#	Method	Endpoint Path	Business Test Scenario	Validation Assertions	Source
---	--------	---------------	------------------------	-----------------------	--------

No test cases generated.

This document outlines project-specific API functional test automation for task-manager.
